London Fire Brigade, PVSTOP Global Pioneer deployed at terrace house.

**1** Mid terrace house fire

**2** Presence of solar panels identified

**3** PVSTOP applied

On the evening of 25th July 2018, PVSTOP was requested for an incident at a terrace property. Fire crews attending the fire in Dagenham identified the presence of solar panels on the roof of a mid-terraced house and an aerial appliance from Tottenham attended.

The crews were able to quickly and effectively deploy PVSTOP onto a seven-string installation and achieve a full coating. Some overspray was evident but this was secondary to the primary objective of eliminating the risk of electrocution.
